# What is SynchIT?

SynchIt is a scheduling helper web app that's primary purpose is to make it easier for people to connect.

The purpose of SynchIT is to help teams of people synchronise their lifestyles, and make it easier to schedule meetings, catch up for brunch, and much more.

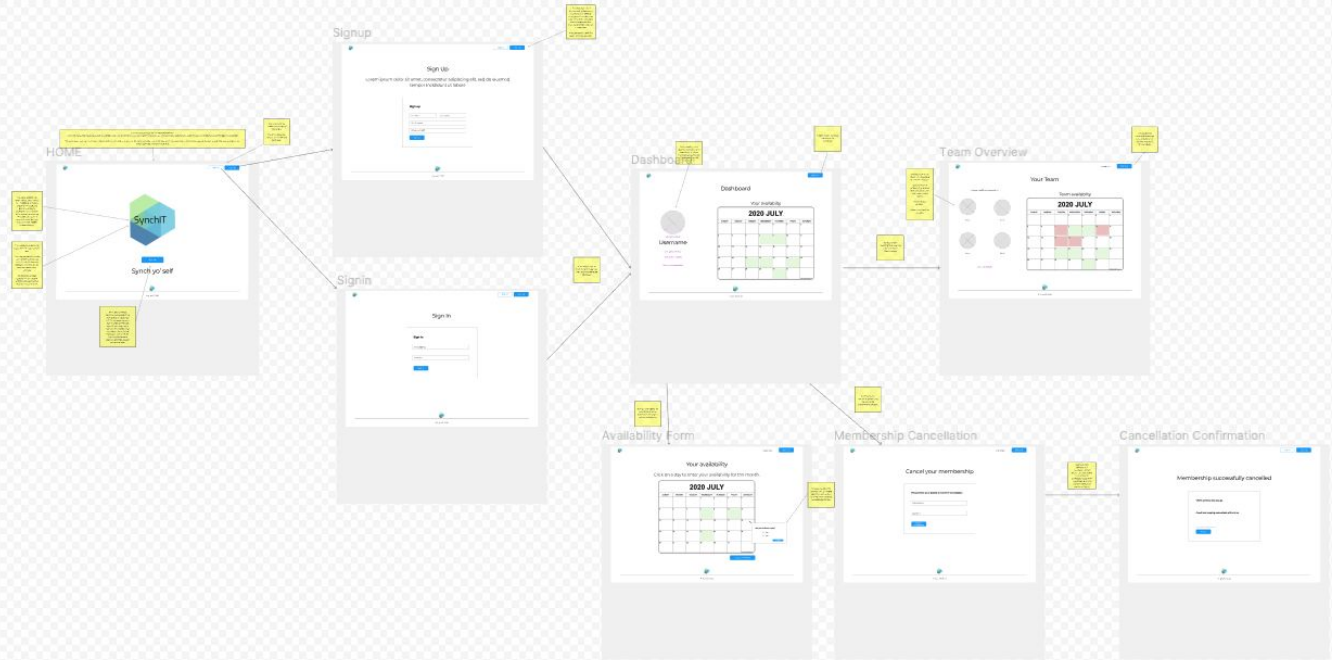

# Functionality

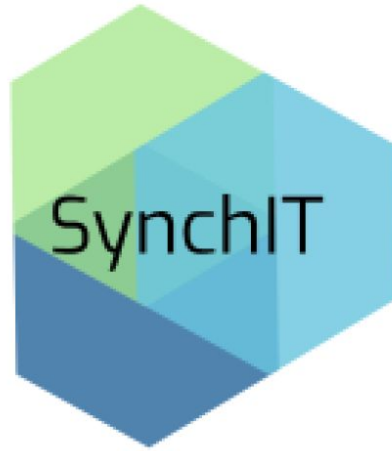

SynchIT works by having the user register as a team along with others, and then entering their availability into a calendar. It then takes all the user input and compares it against the rest of the data collected from the team, and displays it for everyone to see using a colour coded system - Green meaning 'most', if not 'all' users in a cohort are available, Yellow meaning some people are available, and Red meaning not many, and maybe even no one is available.
